Preface to the Fourth Edition	ix
Acknowledgements	x
ONE Introduction	
The development of ideas	1
The development of human population and stages of cultural development	8
Hunting and gathering	11
Humans as cultivators, keepers and metal workers	15
Modern industrial and urban civilizations	24
TWO The Human Impact on Vegetation	
Introduction	29
The use of fire	30
Fires: natural and anthropogenic	32
The temperatures attained in fires	36
Some consequences of fire suppression	37
Some effects of fire on vegetation	38
The role of grazing	39
Deforestation	42
Secondary rain forest	50
The human role in the creation and maintenance of savanna	50
The spread of desert vegetation on desert margins	55
The maquis of the Mediterranean lands	62
The prairie problem	64
Post-Glacial vegetational change in Britain and Europe	65
Introduction, invasion and explosion	70
Air pollution and its effects on plants	76

Forest decline	79
Miscellaneous causes of plant decline	83
The change in genetic and species diversity	85
THREE Human Influence on Animals	
Introduction	89
Domestication of animals	89
Dispersal and invasions of animals	90
Miscellaneous causes of animal contractions and decline	97
Human influence on the expansion of animal populations	117
Animal extinctions	125
FOUR The Human Impact on the Soil	
Introduction	138
Salinity: natural sources	139
Human agency and increased salinity	140
The spread of salinity	145
Consequences of salinity	147
Reclamation of salt-affected lands	149
Lateritization	150
Accelerated podzolization and acidification	151
Soil structure alteration	152
Soil drainage and its impact	155
Soil fertilization	158
Fires and soil	159
Soil erosion: general considerations	160
Soil erosion associated with deforestation and agriculture	162
Soil erosion produced by fire	170
Soil erosion associated with construction and urbanization	171
Attempts at soil conservation	173
FIVE The Human Impact on the Waters	
Deliberate modification of rivers	177
Urbanization and its effects on river flow	191
Deforestation and its effect on river flow	197
The human impact on lake levels	202
Changes in ground-water conditions	206
Water pollution	212
Chemical pollution by agriculture and other activities	214

Deforestation and its effects on water quality	226
Thermal pollution	227
Pollution with suspended sediments	231
Marine pollution	231

SIX Human Agency in Geomorphology

Introduction	235
Landforms produced by excavation	237
Landforms produced by construction and dumping	242
Accelerated sedimentation	247
Ground subsidence	254
Arroyo trenching, gullies and peat hags	263
Accelerated weathering and the tufa decline	267
Accelerated mass movements	269
Deliberate modification of channels	274
Non-deliberate river-channel changes	274
Reactivation and stabilization of sand dunes	281
Accelerated coastal erosion	285
The human impact on seismicity and volcanoes	296

SEVEN The Human Impact on Climate and the Atmosphere

World climates	302
The CO ₂ problem	304
Other gases	307
Aerosols	311
Thermal pollution	315
Vegetation and albedo	315
Forests, irrigation and rain	317
The possible effects of water diversion schemes	318
Lakes	319
Urban climates	320
Smoke haze and photochemical smog	325
Rainmaking and other methods of deliberate climatic modification	333
Air pollution: some further effects	337

EIGHT The Future

The climatic future	350
The spatial patterning of change	354
Further consequences of a global warming	357
Projected sea-level rise	366
Environmental uncertainty	372

NINE Conclusion

The power of non-industrial and pre-industrial civilization	374
The proliferation of impacts	375
Changes are reversible	379
The susceptibility to change	383
Human influence or nature?	385
Into the unknown	387
Guide to Reading	388
References	391
Index	429
